How does the COVID-19 vaccine work?

The vaccine causes your immune system to produce antibodies to COVID-19 and activate your cells to destroy infected cells. If you are ever exposed to COVID-19, your body is ready to defend you.
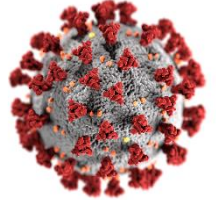

Is the COVID-19 vaccine safe?

Yes. All three vaccines in use have been approved by the Food & Drug Administration for emergency use.

Get Vaccinated.
Do it for them!

Can the vaccine give me COVID-19?

NO, there is no active virus in any of the vaccines currently being used.

Can the COVID-19 vaccine change your DNA?

NO, COVID-19 vaccines do NOT change your DNA.

Are there side effects?

Yes. You may have some pain in the arm where you were injected and some people feel feverish for a day or two, but this tends to go away quickly. Drink plenty of water and take Tylenol after you receive your vaccine.

Do I still need to wear my mask after getting the vaccine?

Yes, until 80% of the US is vaccinated, we all need to:
- wear our masks
- wash our hands frequently
- social distance from those not vaccinated and follow the CDC guidelines.
