The Prince William Health District What You Should Know:

How Handwashing Can Help Stop The Spread of Covid-19

Wash hands with soap and water for at least 20 seconds. Use the cleanest water possible, for example from an improved source. (Water should be from an improved or protected water source. Learn more at <https://washdata.org>.) Use an alcohol-based hand rub that contains 60% alcohol, if soap and water are not available.

1. Wet hands with water.
2. Apply enough soap to cover all hand surfaces.
3. Rub hands together and scrub everywhere.
4. Wash the front and back of your hands, in between your fingers, and under your nails.
5. Rinse hands with water.
6. Dry hands completely using a single-use towel or air dry.

When to wash hand to prevent COVID-19:

- **After** blowing your nose, coughing, or sneezing
- **After** being in a public place
- **Before** and **after** caring for someone who is sick

Remember to wash your hands after each of these activities to stay healthy:

- **Before, during, and after** preparing food
- **Before** eating food
- **After** changing diapers or cleaning up a child who has used the toilet
- **After** using the toilet or latrine
- **After** touching an animal, animal feed, or animal waste
- **After** touching garbage
