The Prince William Health District What You Should Know Protect Your Health: World Tuberculosis Day was March 24, 2022

Tuberculosis (TB) is a serious health condition that usually affects the lungs. When someone is sick with TB, it's called active TB or TB disease. Active TB can spread from person to person through the air, like when someone with active TB sneezes or coughs.

What is latent tuberculosis?

Sometimes, you can have TB but not feel sick. This is called latent tuberculosis infection (LTBI). If you have LTBI, you may not know it — so you need to get tested.

Talk to your doctor about getting tested for LTBI if you:

- Were born in or have lived in a country where TB is common — for example, Mexico, the Philippines, Vietnam, India, or China
- Live or have lived in a large group setting — for example, a homeless shelter, nursing home, or a prison
- Have HIV or another condition that weakens your immune system (the system in the body that fights infection)
- Your doctor should test you for TB before starting HUMIRA

Remember, LTBI doesn't cause any signs or symptoms — so the only way to know if you have it is to get tested. That's why it's important to talk to your doctor if you're at risk for LTBI.

Prince William Health District Covid-19 Testing Services

Residents can schedule an appointment or find testing by visiting the scheduling [website](#), visit the PWHD website <https://www.vdh.virginia.gov/prince-william/3293-2/> or call 1-877-VAX-IN-VA ((877-829-4682, TTY users call 7-1-1), Monday through Friday from 8 a.m. to 6 p.m. Assistance is available in English, Spanish, and more than 100 other languages.
